

## Complete Summary

---

### TITLE

Chronic stable coronary artery disease (CAD): percentage of patients who also have diabetes and/or left ventricular systolic dysfunction (LVSD) who were prescribed angiotensin-converting enzyme (ACE) inhibitor or angiotensin receptor blocker (ARB) therapy.

### SOURCE(S)

American College of Cardiology, American Heart Association, Physician Consortium for Performance Improvement™. Clinical performance measures: chronic stable coronary artery disease. Tools developed by physicians for physicians. Chicago (IL): American Medical Association (AMA); 2005. 8 p. [18 references]

## Measure Domain

### PRIMARY MEASURE DOMAIN

#### Process

The validity of measures depends on how they are built. By examining the key building blocks of a measure, you can assess its validity for your purpose. For more information, visit the [Measure Validity](#) page.

### SECONDARY MEASURE DOMAIN

Does not apply to this measure

## Brief Abstract

### DESCRIPTION

This measure is used to assess the percentage of chronic stable coronary artery disease (CAD) patients who also have diabetes and/or left ventricular systolic dysfunction (LVSD) who were prescribed angiotensin-converting enzyme (ACE) inhibitor or angiotensin receptor blocker (ARB) therapy.

### RATIONALE

According to American College of Cardiology/American Heart Association (ACC/AHA) guidelines, angiotensin-converting enzyme (ACE) inhibitor use is recommended in all patients with coronary artery disease (CAD) who also have

diabetes and/or left ventricular systolic dysfunction (LVSD). ACE inhibitor use is also recommended in patients with CAD or other vascular disease.

In ST-elevation myocardial infarction (STEMI) patients who tolerate ACE inhibitors, an angiotensin receptor blocker (ARB) can be useful as an alternative to ACE inhibitors in the long-term management of STEMI patients, provided there are either clinical or radiological signs of heart failure or left ventricular ejection fraction (LVEF) less than 0.40.

#### PRIMARY CLINICAL COMPONENT

Coronary artery disease (CAD); angiotensin-converting enzyme (ACE) inhibitor therapy; angiotensin receptor blocker (ARB) therapy

#### DENOMINATOR DESCRIPTION

All patients with coronary artery disease (CAD) who also have diabetes and/or left ventricular systolic dysfunction (LVSD)

#### NUMERATOR DESCRIPTION

Patients from the denominator who were prescribed angiotensin-converting enzyme (ACE) inhibitor or angiotensin receptor blocker (ARB) therapy

### Evidence Supporting the Measure

#### EVIDENCE SUPPORTING THE CRITERION OF QUALITY

- A clinical practice guideline or other peer-reviewed synthesis of the clinical evidence
- One or more research studies published in a National Library of Medicine (NLM) indexed, peer-reviewed journal

#### NATIONAL GUIDELINE CLEARINGHOUSE LINK

- [ACC/AHA 2002 guideline update for the management of patients with chronic stable angina: a report of the American College of Cardiology/American Heart Association Task Force on Practice Guidelines \(Committee to Update the 1999 Guidelines for the Management of Patients With Chronic Stable Angina\).](#)
- [ACC/AHA guidelines for the management of patients with ST-elevation myocardial infarction. A report of the American College of Cardiology/American Heart Association Task Force on Practice Guidelines \(Committee to revise the 1999 guidelines for the Management of Acute Myocardial Infarction\).](#)

### Evidence Supporting Need for the Measure

#### NEED FOR THE MEASURE

Overall poor quality for the performance measured  
Variation in quality for the performance measured

#### EVIDENCE SUPPORTING NEED FOR THE MEASURE

Gibbons RJ, Abrams J, Chatterjee K, Daley J, Deedwania PC, Douglas JS, Ferguson TB Jr, Fihn SD, Fraker TD Jr, Gardin JM, O'Rourke RA, Pasternak RC, Williams SV. ACC/AHA 2002 guideline update for the management of patients with chronic stable angina. Summary article. J Am Coll Cardiol 2003 Jan 1; 41(1): 159-68.  
[PubMed](#)

#### State of Use of the Measure

##### STATE OF USE

Pilot testing

##### CURRENT USE

Internal quality improvement

#### Application of Measure in its Current Use

##### CARE SETTING

Ambulatory Care  
Community Health Care  
Managed Care Plans  
Physician Group Practices/Clinics  
Rural Health Care

##### PROFESSIONALS RESPONSIBLE FOR HEALTH CARE

Advanced Practice Nurses  
Physician Assistants  
Physicians

##### LOWEST LEVEL OF HEALTH CARE DELIVERY ADDRESSED

Individual Clinicians

##### TARGET POPULATION AGE

Patients of all ages with the diagnosis of chronic stable coronary artery disease (CAD)

## TARGET POPULATION GENDER

Either male or female

## STRATIFICATION BY VULNERABLE POPULATIONS

Unspecified

### Characteristics of the Primary Clinical Component

## INCIDENCE/PREVALENCE

- Approximately 13 million Americans are living with coronary artery disease (CAD).
- More than 1 million Americans had a new or recurrent coronary attack in 2001.
- Despite potential risks and established clinical guidelines, recent data suggest that some patients are not being managed optimally for this disease. It has been reported that in some states only 74% of Medicare patients hospitalized for acute myocardial infarction (AMI) were prescribed angiotensin-converting enzyme (ACE) inhibitor therapy on discharge.

## EVIDENCE FOR INCIDENCE/PREVALENCE

American Heart Association. Heart disease and stroke statistics - 2003 update. Dallas (TX): American Heart Association; 2002. 46 p.

Jencks SF, Huff ED, Cuerdon T. Change in the quality of care delivered to Medicare beneficiaries, 1998-1999 to 2000-2001. JAMA2003 Jan 15;289(3):305-12. [PubMed](#)

## ASSOCIATION WITH VULNERABLE POPULATIONS

Unspecified

## BURDEN OF ILLNESS

- Chronic stable coronary artery disease (CAD) is the leading cause of mortality in the United States, accounting for almost 1 in 5 deaths.
- For individuals with CAD, the risk of another heart attack, stroke, and other serious complications is substantial.

## EVIDENCE FOR BURDEN OF ILLNESS

American Heart Association. Heart disease and stroke statistics - 2003 update. Dallas (TX): American Heart Association; 2002. 46 p.

## UTILIZATION

Within the past 2 decades, the number of short-stay hospital discharges for individuals with coronary artery disease (CAD) increased by almost 18%.

#### EVIDENCE FOR UTILIZATION

American Heart Association. Heart disease and stroke statistics - 2003 update. Dallas (TX): American Heart Association; 2002. 46 p.

#### COSTS

The total annual cost of coronary artery disease (CAD) in the United States is approximately \$130 billion.

#### EVIDENCE FOR COSTS

American Heart Association. Heart disease and stroke statistics - 2003 update. Dallas (TX): American Heart Association; 2002. 46 p.

### Institute of Medicine National Healthcare Quality Report Categories

#### IOM CARE NEED

#### IOM DOMAIN

Effectiveness

### Data Collection for the Measure

#### CASE FINDING

Users of care only

#### DESCRIPTION OF CASE FINDING

All patients with coronary artery disease (CAD) who also have diabetes and/or left ventricular systolic dysfunction (LVSD)

#### DENOMINATOR SAMPLING FRAME

Patients associated with provider

#### DENOMINATOR INCLUSIONS/EXCLUSIONS

##### Inclusions

All patients with coronary artery disease (CAD) who also have diabetes and/or left ventricular systolic dysfunction (LVSD) (left ventricular ejection fraction [LVEF] less than 40% or moderately or severely depressed LVSD)

## Exclusions

Documentation of medical reason(s)\* for not prescribing angiotensin-converting enzyme (ACE) inhibitor and for not prescribing angiotensin receptor blocker (ARB) therapy; documentation of patient reason(s)\*\* for not prescribing ACE inhibitor and for not prescribing ARB therapy

\*Medical reasons for not prescribing ACE inhibitor (ACEI): allergy, angioedema due to ACEI, anuric renal failure due to ACEI, pregnancy, moderate or severe aortic stenosis, etc.

\*\*Patient reasons for not prescribing ACEI: economic, social, and/or religious, etc.

## RELATIONSHIP OF DENOMINATOR TO NUMERATOR

All cases in the denominator are equally eligible to appear in the numerator

## DENOMINATOR (INDEX) EVENT

Clinical Condition

## DENOMINATOR TIME WINDOW

Time window follows index event

## NUMERATOR INCLUSIONS/EXCLUSIONS

### Inclusions

Patients from the denominator who were prescribed angiotensin-converting enzyme (ACE) inhibitor or angiotensin receptor blocker (ARB) therapy

### Exclusions

None

## MEASURE RESULTS UNDER CONTROL OF HEALTH CARE PROFESSIONALS, ORGANIZATIONS AND/OR POLICYMAKERS

The measure results are somewhat or substantially under the control of the health care professionals, organizations and/or policymakers to whom the measure applies.

## NUMERATOR TIME WINDOW

Fixed time period

## DATA SOURCE

Medical record

## LEVEL OF DETERMINATION OF QUALITY

Individual Case

PRE-EXISTING INSTRUMENT USED

None

Computation of the Measure

SCORING

Rate

INTERPRETATION OF SCORE

Better quality is associated with a higher score

ALLOWANCE FOR PATIENT FACTORS

Unspecified

STANDARD OF COMPARISON

Internal time comparison

Evaluation of Measure Properties

EXTENT OF MEASURE TESTING

Unspecified

Identifying Information

ORIGINAL TITLE

ACE inhibitor or ARB therapy.

## NQMC STATUS

This NQMC summary was completed by ECRI on September 26, 2003. The information was verified by the measure developer on January 28, 2004. This NQMC summary was updated by ECRI on September 28, 2005.

## COPYRIGHT STATEMENT

Physician Performance Measures (Measures) and related data specifications, developed by the Physician Consortium for Performance Improvement (the Consortium), are intended to facilitate quality improvement activities by physicians.

These Measures are intended to assist physicians in enhancing quality of care. Measures are designed for use by any physician who manages the care of a patient for a specific condition or for prevention. These performance Measures are not clinical guidelines and do not establish a standard of medical care. The Consortium has not tested its Measures for all potential applications. The Consortium encourages the testing and evaluation of its Measures.

Measures are subject to review and may be revised or rescinded at any time by the Consortium. The Measures may not be altered without the prior written approval of the Consortium. Measures developed by the Consortium, while copyrighted, can be reproduced and distributed, without modification, for noncommercial purposes, e.g., use by health care providers in connection with

their practices. Commercial use is defined as the sale, license, or distribution of the Measures for commercial gain, or incorporation of the Measures into a product or service that is sold, licensed or distributed for commercial gain. Commercial uses of the Measures require a license agreement between the user and American Medical Association, on behalf of the Consortium.
